

# **BANKING SYSTEM**

## **PROJECT REPORT**

Project Name: Banking System

Submitted By:

Name: Pediredla Mani

Roll Number: 23981A05M6

Branch: Computer Science and Engineering (CSE)

College Name: Raghu Engineering College

Guide Name: Self Learning

Academic Year: 2025 – 2026

Date of Submission: 05-06-2026

Signature of Student

(Pediredla Mani)

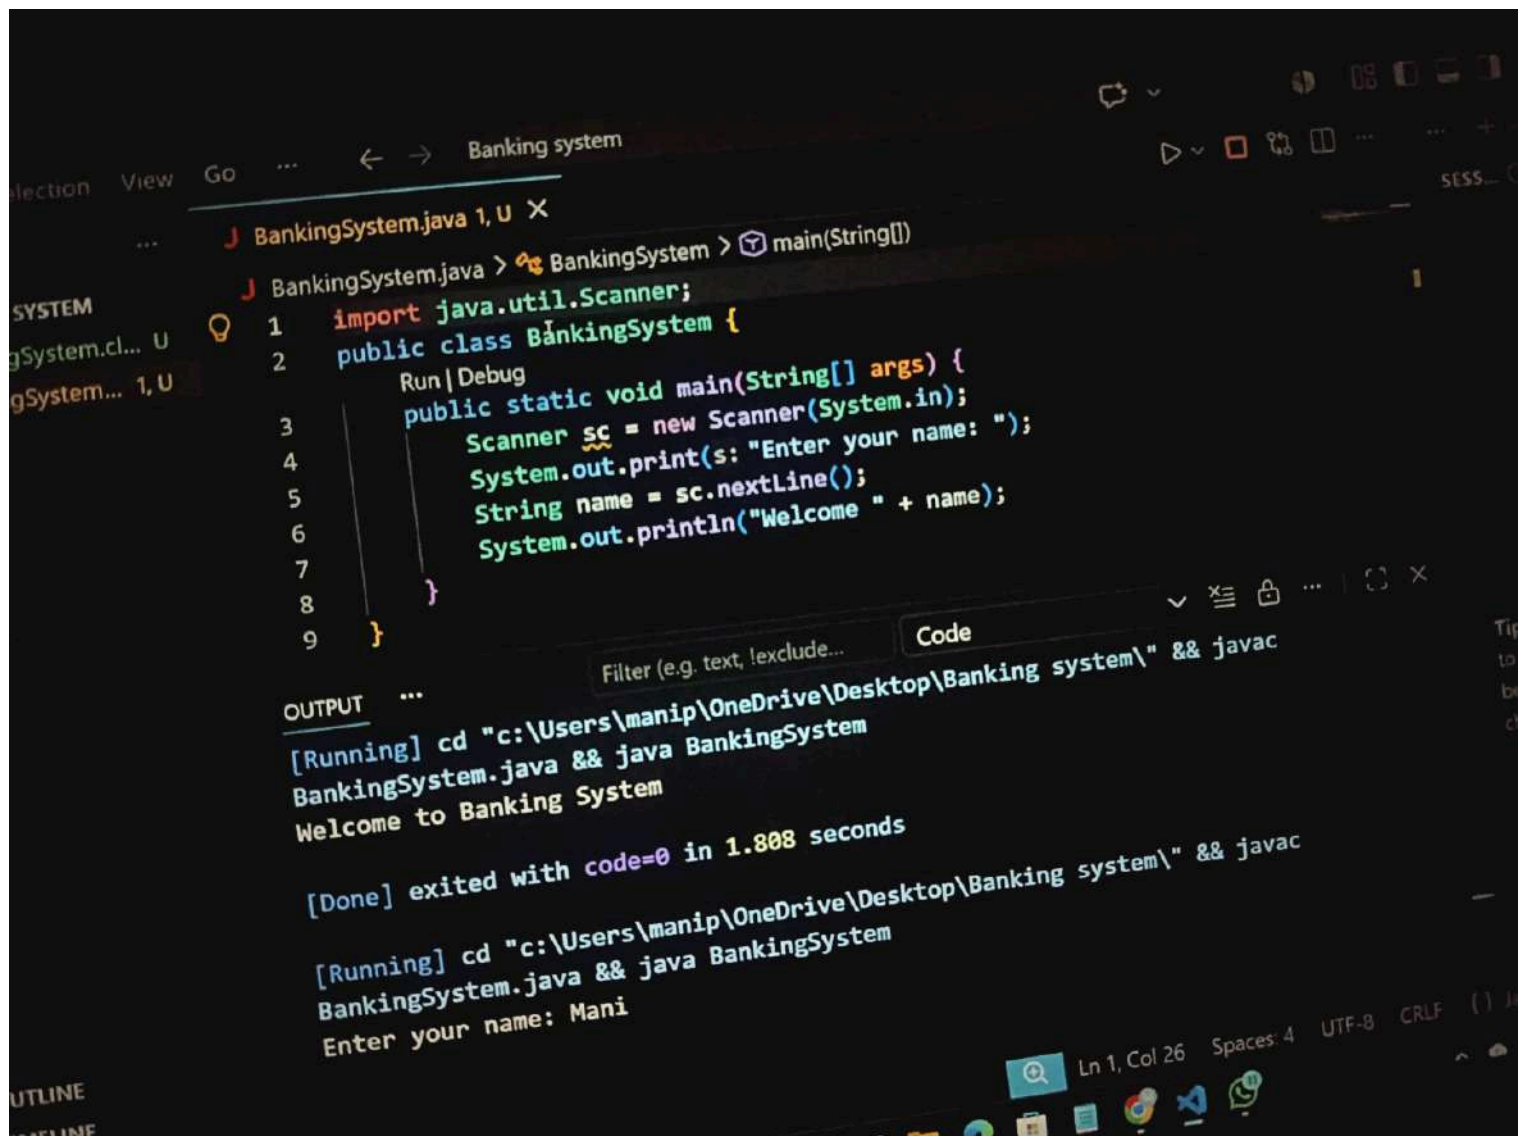

# PROJECT DESCRIPTION AND OBJECTIVES

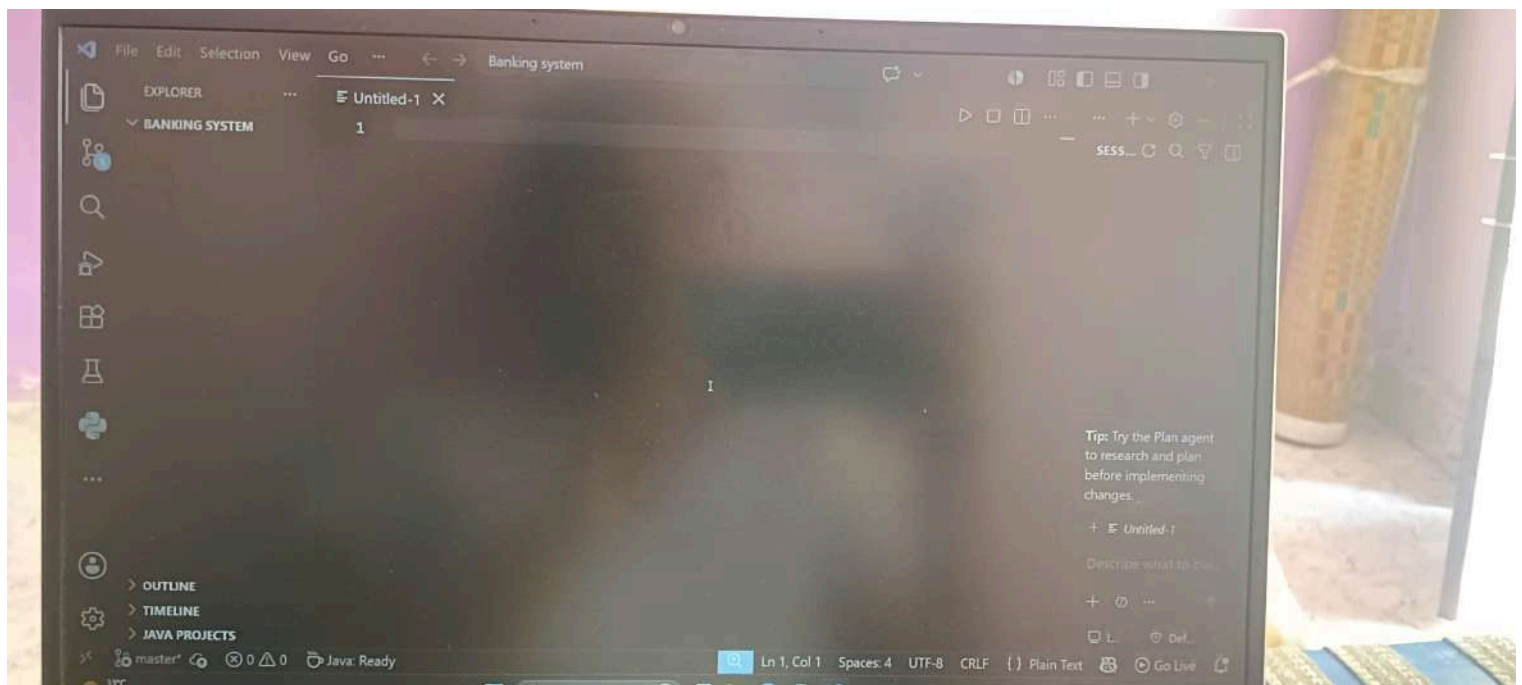

## Project Description

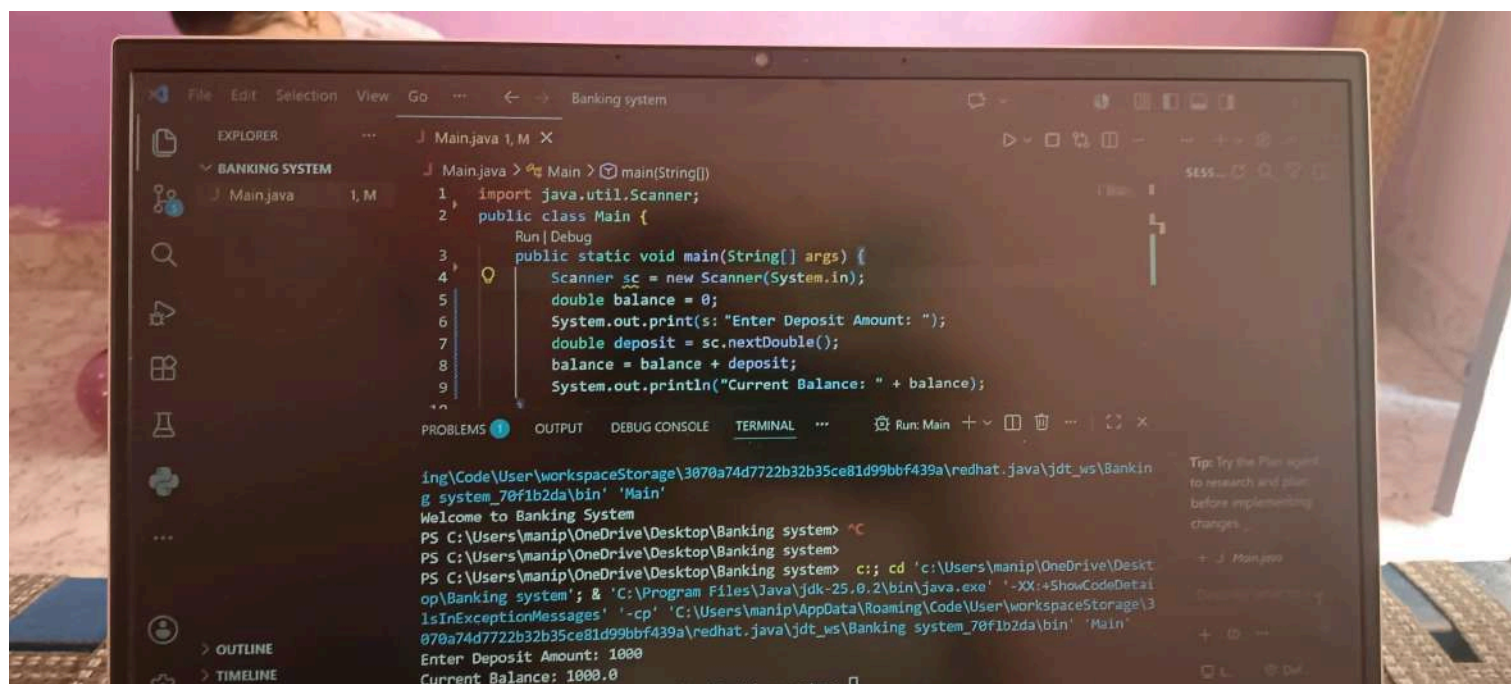

The Banking System project is a Java-based application developed to manage basic banking operations. The system allows users to create accounts, deposit money, withdraw money, check balances, and view account details. The project demonstrates the use of object-oriented programming concepts, file handling, and user interaction in Java.

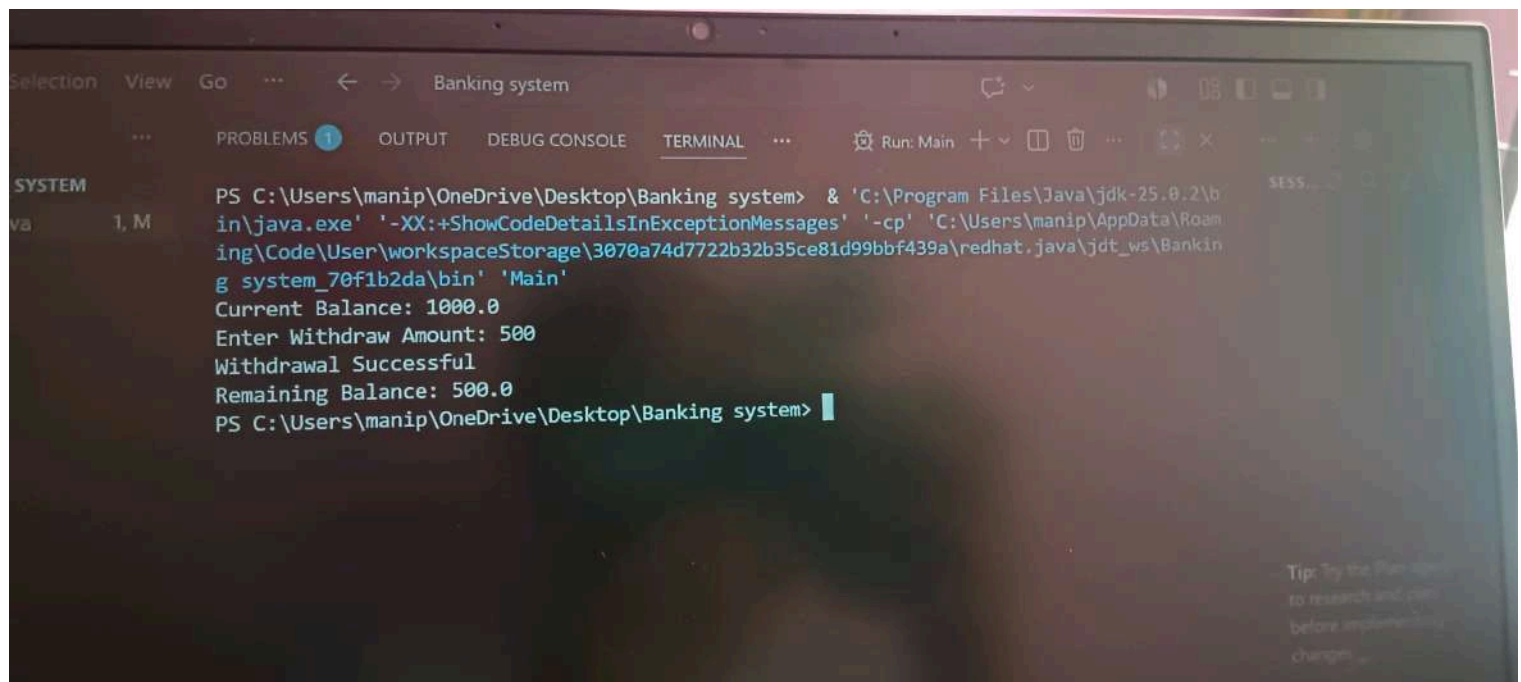

## Project Objectives

1. To develop a simple and efficient banking management system.
2. To perform account creation and management operations.
3. To enable deposit and withdrawal transactions.
4. To display account information and account balance.
5. To improve understanding of Java programming concepts.
6. To provide a user-friendly interface for banking operations.

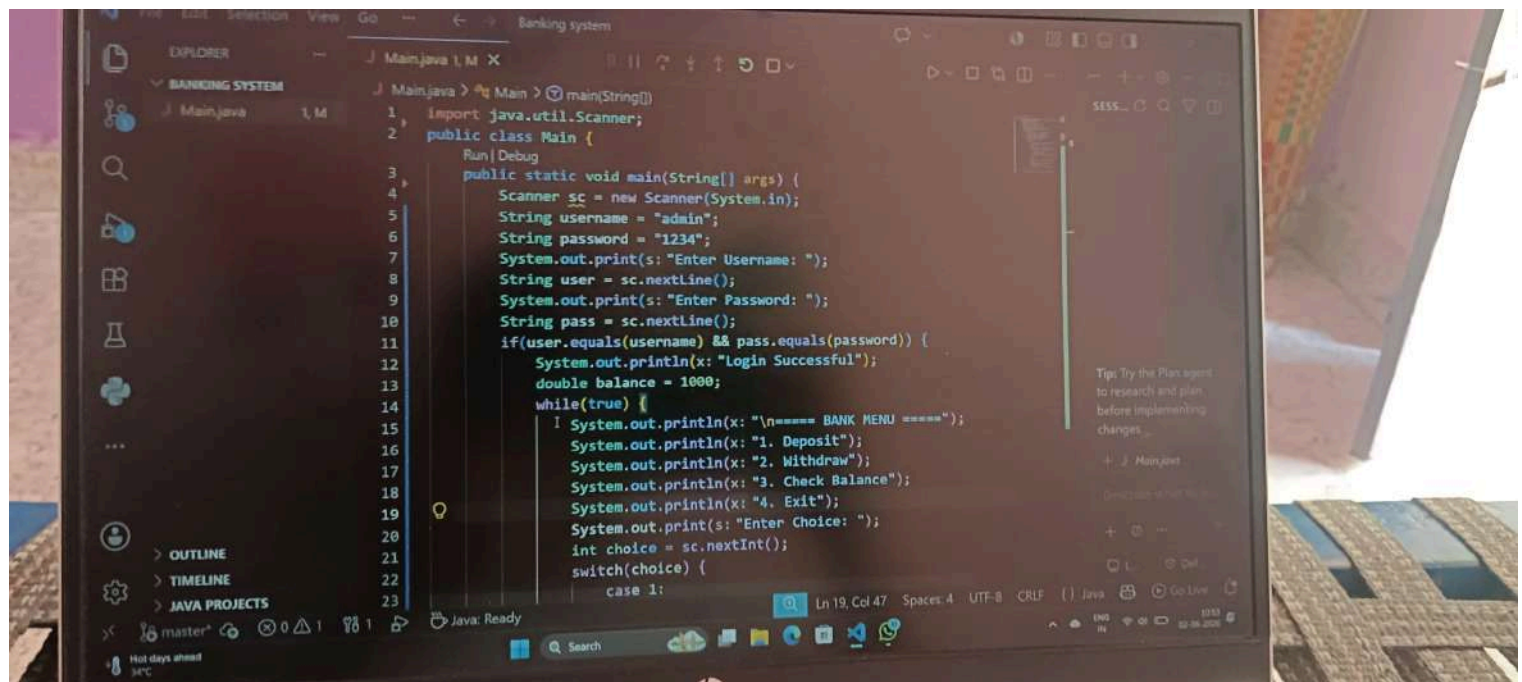

The screenshot shows an IDE window titled "Banking system". The Explorer panel on the left shows a project named "BANKING SYSTEM" containing a file "Main.java". The editor displays the following Java code:

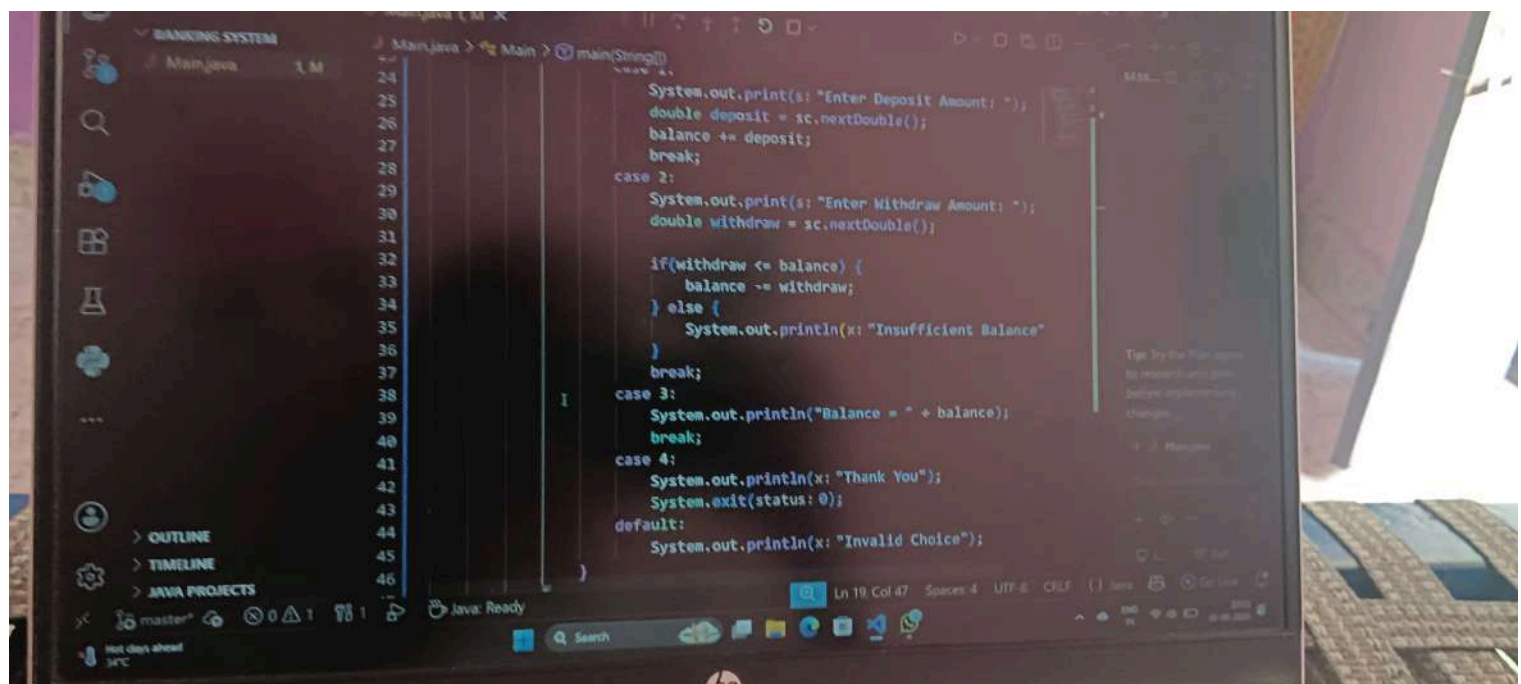

```
1  public class Main {
2      public static void main(String[] args) {
3          Scanner sc = new Scanner(System.in);
4          double balance = 1000;
5          System.out.println("Current Balance: " + balance);
6          System.out.print(s: "Enter Withdraw Amount: ");
7          double withdraw = sc.nextDouble();
8          if (withdraw <= balance) {
9              balance = balance - withdraw;
10             System.out.println(x: "Withdrawal Successful");
11             System.out.println("Remaining Balance: " + balance);
12         } else {
13             System.out.println(x: "Insufficient Balance");
14         }
15     }
16 }
17 }
```

On the right side of the editor, there is a "Run | Debug" button and a "TEST" button. A tip box at the bottom right reads: "Tip: Try the Run button to test your code before implementing changes."

```
44         System.exit(status: 0);
45     default:
46         System.out.println(x: "Invalid Choice");
47     }
48 } else {
49     System.out.println(x: "Invalid Username or Password");
50 }
51 }
52 }
```
